

BRICKLAYERS WHITE® CEMENT

AALBORG WHITE

*Why do I need to use **BRICKLAYERS WHITE® CEMENT**, instead of off white cement?*

- Brick cleaning becomes a real dream when **BRICKLAYERS WHITE®** Cement has been used. No longer will the face of the bricks be ruined from the need to use excessive water pressure or acid. Even your total water consumption for the Brick Cleaning process will be significantly reduced, and we all need to save water.
- **BRICKLAYERS WHITE®** Cement will last up to 120 minutes in the barrow or on the mud board, without having to be “knocked up” or even thrown out. Waste and disposal are both reduced, therefore cost savings are maximized. A “must” for the summer months.
- **BRICKLAYERS WHITE®** Cement is deemed to comply with AS3700-2001 (Appendix D) in all respects. Confirmed by extensive testing conducted by the University of Newcastle. Test Number A/363
- **BRICKLAYERS WHITE®** Cement is the only purpose manufactured **masonry cement** available on the Australian East Coast. All other cements are designed and manufactured primarily for concrete batching and/or grouting, not mortar batching
- **BRICKLAYERS WHITE®** Cement is crisp white cement, enabling it to enhance and beautify almost any masonry structure built with blocks, bricks or stone.
- Oxides will display their true colours when batched with **BRICKLAYERS WHITE®** Cement.
- **BRICKLAYERS WHITE®** Cement is terrific for rendering when batched with a good quality rendering sand. The finish can be left natural, sealed or painted if needed. Floor and wall Tilers will love grouting with **BRICKLAYERS WHITE®** Cement straight from the bag, there are no further additives required, just clean water.
- Since 2004, **BRICKLAYERS WHITE®** Cement has been the product of choice in numerous multi award winning projects entered in the “Excellence in Brick and Block Awards” which are judged by the Masonry Contractors Association of NSW & ACT. In fact, **BRICKLAYERS WHITE®** Cement was selected and exclusively used in the Project which was the overall winner of the awards in 2006.
- **BRICKLAYERS WHITE®** Cement contains “Type HE” cement as a base, which provides for superior 3,7 and 28 day strengths.
- **BRICKLAYERS WHITE®** Cement is a very easy product to batch. Everything you need is in the bag, no need to measure and add Liquid Plasticisers or even Hydrated Lime.

Just good quality sand and clean water.....It's really that simple.
